Identification of Medicinal Products (IDMP) is a set of global standards developed by the International Organization for Standardization (ISO) for the identification and exchange of information about medicinal products to improve patient safety and facilitate the exchange of information between regulatory authorities, healthcare professionals, and pharmaceutical companies.

The IDMP Ontology provides a universal implementation of the IDMP product data model as a common language to effectively bridge the gap between people, processes, and systems.

In this wiki you can find all relevant information to help you implement the IDMP Ontology in your organization. A general project overview is available at the Pistoia Alliance project website.
