

FIBO Foundations Roadmap

Current target: 2019Q1.5 Release

Housekeeping JIRAs (namespaces etc.)	Inconsistencies in namespace abbreviations
Simple / mechanical JIRAs	Basic JIRAs requiring a simple, uncontroversial textual change
Remove dependencies in FND on TimeExt and other deprecable ontologies	Internal references within Ext content for these ontologies to be removed
Ratings concepts	Review and approve Ratings FND ontology to support work in FBC/IND etc.
High level abstractions for codes etc.	Finalize and implement policy on making high level abstractions available for information-like things; keep clear distinction between a code (for an application) and the thing the code is about
Remove redundant ontologies	Removal of any Ext material that is no longer referenced in ontologies that are not themselves in Ext status Note that concepts that were created for future known finance industry content are to be retained, but moved to Provisional.
