2019-04-02 Meeting notes

Date

02 Apr 2019

Attendees

- Mike Bennett
- Bobbin Teegarden
- John Gemski
- Maxwell Gillmore
- Pete Rivett
- Mike Atkin
- Elisa Kendall

Agenda

The main agenda for this week is to review and triage open Jira issues.

1) Open Action Items

2) JIRA Issues Review and triage

3) Road map.

4) Next Meeting.

Proceedings:

20190402 FIBO FND FCT.docx

Ext Ontologies

Issue: what to do about the "Ext ontologies" that are either not referenced or referenced elsewhere. The goal is to simplify FIBO and remove any extraneous references

Issue: what to do about "additional content" that might be needed in the future

Issue: What to do about "duplicate content" (i.e. multiple references to price or account)

More analysis of Ext is still required to determine what to remove, add, adjust (1st step = MB to review the "abstract notes" and walk through the existing ontologies in with EK)

Action: MB to map from elements in Ext that have already been replaced at the class and property level

Decision: after mapping, keep things that might be needed in the future in "provisional" for evaluation by new FCT when formed

Business Maturity (SME history)

Issue: how do we identify the business maturity of the legacy Domains material (good SME review but need OWL oversight vs those that haven't had SME review)

Suggestion: MB to review old ontologies and create an Excel spreadsheet reflecting his "opinion" about the level of business review for ontologies that aren't currently used in Release or Development

If someone comes to FIBO without prior experience - they are running into "low maturity" ontologies. We should ensure proper health warnings on what people are evaluating

Recent Jiras

FBC-219

FBC-219 - clean up datatype properties and restrictions on xsd:string (can it be language tagged) - in RDF 1.1 (any property/restriction involving xsd:string - needs to be reviewed to determine if anyone should be using a language tag)

Elisa Kendall: Any data property that currently has a range of xsd:string, or any restriction on xsd:string needs to be reviewed to determine whether or not it should be used with a language tagged string. If so, then either the property should be modified to eliminate the range, or in the case of some values from use rdfs:Literal

CCM Repository

Next upgrade of CCM v19 service pack 2 is being evaluated by MB (coordinated update will follow)

Decisions:

After mapping, keep things that might be needed in the future in "provisional" for evaluation by new FCT when formed

Action items

- [ ] Mike Bennett MB to map from elements in Ext that have already been replaced at the class and property level
- [ ] Mike Bennett MB to review old ontologies and create an Excel spreadsheet reflecting his "opinion" about the level of business review for ontologies that aren't currently used in Release or Development
