BE-180 Questions Arising

DocumentationExt - need to change the domain of authorOf to be some kind of human.

Documentation and Documents are distinct ontologies.

MG Comment: Documentation is a different subject matter to Documents

MB: Yes, but here the scope is similar in that these properties relate to a kind of document.

Systemic question: do we raise JIRAs for things that are wrong in Ext but are not referenced?

This is one of the properties that is only there to define the meaning of the thing and has no operational import.

Proposal: why not comment it out and leave a comment behind?

Good idea.

Then we have an audit trail in place

BUT: Serializer won't keep this in place

PR: You already have an audit trail in the form of the JIRA and the history from that.

(if we raise a JIRA)

To be discussed generally as a policy thing. Take it to FLT.

Decisions:

Action items
