Proceedings:

David has learned that the data that State Street used for their PoC is still "there", but they will need an Anzo license to extract it (in RDF). David is going to investigate getting a temporary license so that we can experiment with the content. We might have to work with the data at State Street, or anonymize some of it for examples.

One way to work on it would be to access it at David's facility - we might have to do that in Boston, and might need help from Cambridge Semantics to do the re-mapping. David has a call with Marty next week on another topic, and will ask.

Next week, in addition to working on market indices, we will start to model individuals for some of the economic indicators we have.
